PROJECTS

RAILWAY RESERVATION SYSTEM(DATABASE MANAGMENT SYSTEM,MYSQL):

This project is a railway reservation website that can help a certain railway company to automate their ticket generation. The website allows both user as well as admin login. The admin can login into the website in order to manage various trains, their arrival and departure time, their starting station and destination, ticket fares etc. Whereas users can login to check train availability, book and cancel tickets, check PNR status etc.

ONLINE GAMING WEBSITE:

Made a gaming website with back-end by using the feature of HTML, CSS, PHP, JavaScript and which is hosted by Apache Tomcat. In this website we are able to play game online. in back-end.

CRIMINAL RECORD DATABASE FOR PRISON:

Made a database with python libraries. In this project we are able to attached or remove some data of criminal or see full list of criminals. and we can see a single criminal details also by searching the name of the criminal.

ACHIEVEMNTS

Solved over 350+ questions of data structures and algorithms over various coding platforms such as [GeeksforGeeks](#) and LeetCode. And have a coding score of '760' on GeeksforGeeks practice portal (institute rank 21).

Design and simulated a Yagi-Uda 4 element antenna for used in TV reception. which is operate on 2000 MHz using CST software and then fabrication and testing is done in communication lab.

Core team Member of Skills Nights Club IIITN (Programming Club of Indian Institute of Technology, Nagpur). Organized many sessions related to Web Development and Competitive Programming for new Freshers coming to the college
